

Organic pumpkins

Noord—Brabant, 2013

The entrepreneur has an organic cultivation. The purpose of the test was to determine whether the quality and especially the sustainability of pumpkins increases, so there is less loss during storage.

Application: 25 ltr/ha, spread over three sprayings --- after sowing

--- when the plants are just sprouting

--- when the plants are full grown

Results:

- Gross yield 4% higher
- 12 % tare weight after storage against 18% tarra with untreated pumpkins
- This leads 12% more Net yield
- Brix value: Approx 20% higher.
